

sani-case UV

LED sterilizing travel bag

User Manual

Available in 4 Colors:    

Introduction & Features

Sanitize anything with UV-C LED technology that gets the job done – and done exceptionally well! The tzumi sani-case UV is a specially designed UV sterilizing bag that sterilizes all your accessories and other belongings (wallet, keys, pens, undergarments, masks, etc.) in as little as 10 minutes. All it takes is one-click for the sani-case UV to achieve a 99.9% sterilization efficiency rate.

- Portable, Compact & Lightweight
- Built in Safety Shutdown Feature
- No Radiation, Ozone, or Chemicals Used – Just Pure UV-C Light
- One Touch Operation

How To Use

1. Unzip the lid of the sani-case UV.
2. Place the items to be sterilized inside the bag. Be sure to keep them apart without any overlap.
3. Zip up the lid on the sani-case UV – be sure that it is completely sealed all the way around.
4. Press the button on the lid of the TravelBag to begin sterilizing. The white, LED indicator will flicker throughout the 10 minute sterilization process.
5. When the LED indicator stops flickering the process is complete and it is now safe to remove your items from the sani-case UV.

Charging The sani-case UV Travel Bag

Plug the sani-case UV into a suitable USB port. When the LED indicator glows a steady red the bag is charging. When the red light switches off, the sani-case UV is fully charged. It should take approximately 3 hours for the sani-case UV to fully charge.

Safety Measures

Avoid direct eyes or skin exposure to the UV light inside the bag. As a built-in safety precaution, the UV-C LED light inside the sani-case UV will shut down immediately when the bag is opened.

Indicator Light

Working status	Indicator
Sterilizing complete/standby	Solid
Sterilizing	Flickering
Sleep Mode	Off

Specs

Power	DC 5V/1.5A
